

FusionHub Release 6.3.2 Release Notes

Release Date: 10/19/2016

1. New Features

Feature	Description
Inbound Port Forwarding Support	Assign a static IP address to FusionHub. This is useful for deployments where your end-router's IP cannot be kept static. Clients located on the LAN will automatically configure the router in order to allow routers on the WAN to connect to each other. This way, the process of inbound port forwarding is automated. Detailed Walkthrough
IPsec VPN support	Create IPsec profiles. The evaluation license supports 2 IPsec profiles; the number of available IPsec profiles in commercial versions depends on the number of supported peers for each version of FusionHub.

2. Resolved Issues

Reference no.	Improvement
13583	PepVPN: After establishing a PepVPN connection and modifying a device name right after, the connection will no longer get cut.

3. Known Issues

None

4. Report a Bug

To report a bug, please open a forum thread at <https://forum.peplink.com/>
